Professional Summary

Computer Science (Data Science) student who builds and ships full-stack and machine-learning applications, from OCR pipelines to deployed microservice platforms. Writes research papers, drives R&D on new product ideas and vibe-codes working prototypes fast with AI tools. Also designs posters and social media creatives in Adobe Photoshop, Illustrator and Canva.

Skills

Graphic Design: Poster making, social media creatives, ad banners and logos in Adobe Photoshop, Adobe Illustrator and Canva

Research & Development: Research paper writing, literature review, R&D and rapid prototyping of new product ideas

Vibe Coding: AI-assisted development with Claude Code and Codex to design, build and ship working apps fast

Machine Learning & Data: Python, PyTorch, Hugging Face Transformers (TrOCR), XGBoost, OpenCV, Pandas, Streamlit

Languages: Python, Java, C++, C, SQL, TypeScript, JavaScript

Backend: FastAPI, Flask, Node.js, Express, Socket.io

Frontend & Mobile: React 18, Next.js, React Native, Expo, Vite, Tailwind CSS

Databases & DevOps: PostgreSQL, SQLite, Redis, Prisma, Docker, Git/GitHub, Render

Key Projects

ExamShield (E-Shield): AI Handwritten Answer-Sheet Evaluator *Jul – Sep 2026*

- Offline AI system that learns how teachers grade from previously corrected scripts, then evaluates new scanned handwritten answer sheets with question-wise marks, totals and per-answer feedback.
- Owned the ingestion, OCR and segmentation track in a 3-person team: PDF loading and preprocessing, TrOCR-large handwriting recognition with confidence scoring, question segmentation and answer matching, plus the upload UI.
- Pipeline pairs a TrOCR reader with an XGBoost marking model behind a FastAPI API; ships as a Next.js dashboard, an Expo mobile client and a double-click macOS desktop app.

  Tech: *Python*, *PyTorch*, *TrOCR*, *XGBoost*, *OpenCV*, *FastAPI*, *Next.js*, *TypeScript*, *Expo*

CodeVault: Developer Activity Platform (Deployed) *Jul 2026*

- Full-stack platform on a microservices architecture (web, backend, git-service, admin) that syncs and manages a developer's coding activity across multiple platforms.
- Implemented JWT authentication, PostgreSQL row-level security for per-user data isolation and Redis caching; containerised every service with Docker and deployed on Render (codevault-ig6c.onrender.com).

  Tech: *React*, *React Native*, *Node.js*, *TypeScript*, *PostgreSQL*, *Prisma*, *Redis*, *Docker*, *Render*

Sign Language Recognition System *Feb 2026*

- Computer-vision model that recognises sign-language hand gestures in real time and converts them to readable text to support hearing- and speech-impaired users.

  Tech: *Python*, *OpenCV*, *Machine Learning*

Education

Sreenidhi Institute of Science and Technology **CGPA: 8.6**
B.Tech in Computer Science – Data Science

Certifications

- Python for Data Science / Programming – NPTEL (2026)
- Python Programming – Udemy (2025)
- C and C++ Programming – Coursera (2024)
